

FitPulse — Week 1 Task Submission

Project Planning, Mobile App Architecture & UX Wireframes | Internship Deliverable

Project Plan: FitPulse Mobile Application

1. Executive Summary

FitPulse is a modern, lightweight mobile health and habit-tracking application designed to streamline daily fitness logging, active exercise tracking, and personal consistency.

2. Project Objectives

- **Simplify Tracking:** Reduce the effort required to log daily workouts and habits to under 10 seconds per entry.
- **Enhance Visual Feedback:** Provide immediate visual feedback via real-time progress indicators and streak metrics to improve user retention.
- **Streamline Navigation:** Implement a flat navigation structure to allow single-tap access to primary features.

3. Target Audience

- **Primary Persona:** Young adults and students (18–28) looking for a fast, minimal habit and exercise tracker without bloated menus.
- **Secondary Persona:** Busy professionals needing quick visual recaps of weekly physical activity and habit consistency.

4. Core Feature Specifications

- **Daily Dashboard:** Live progress metrics (calories, active minutes, step counters) with quick-action logging triggers.
 - **Active Workout Logger:** High-contrast exercise execution mode featuring dynamic set/rep counters and real-time rest timers.
 - **Habit Checklist:** Interactive weekly checklist supporting swipe gestures for status toggling.
 - **Analytics Engine:** Visual breakdown of workout volume and consistency heatmaps across weekly and monthly horizons.
 - **User Profile & Preferences:** Centralized control center for targets, metrics units, and data configuration.
-

User Flow & Screen Map: FitPulse

Primary Navigation Architecture

FitPulse uses a 5-tab Bottom Navigation Bar present across all primary screens.

[Dashboard] <---> [Workout Track] <---> [Habit Log] <---> [Analytics] <---> [Profile]

Screen Specifications & Wireframe Mapping

Screen 1: Dashboard (Home)

- **Header:** Avatar, Current Streak Badge (■), Notifications.
- **Primary Metric:** Circular ring progress indicator (Calories, Active Time, Steps).
- **CTA:** Full-width "Start Today's Workout" primary button.
- **Secondary View:** Horizontal card slider showing today's pending habits.

Screen 2: Active Workout Tracking

- **Header:** Exercise Title, Active Workout Timer.
- **Interactive Area:** Exercise demonstration placeholder + Set/Rep input fields.
- **Control:** Large bottom-anchored "Complete Set" button designed for thumb reachability.

Screen 3: Habit Logging

- **Header:** Weekly calendar view with visual completion badges.
- **List View:** Vertical habit list itemizing target frequency, current streak, and checkbox controls.
- **Action:** Floating Action Button (+) to register a new habit.

Screen 4: Analytics & Progress

- **Segment Control:** Timeframe selector (Week / Month / Year).
- **Visuals:** Bar charts for workout volume and a grid-based consistency heatmap.
- **Metrics:** Summary statistics (Total Sets Completed, Total Active Hours).

Screen 5: User Profile & Settings

- **Header:** User Avatar, Display Name, Current Fitness Goal Badge.
- **List:** Account Details, Goal Customization, App Preferences, Export Data CTA.

Wireframe UI Designs

Below are the 5 core screen wireframe designs created for the FitPulse architecture.

Screen 1: Dashboard / Home View

Screen 2: Active Workout Tracker

Screen 3: Daily Habit Logging View

Screen 4: Analytics & Progress View

Screen 5: User Profile & Preferences

UX Design Rationale & Architectural Decisions

Executive Overview

The user interface design of FitPulse is driven by key principles of human-computer interaction (HCI), ergonomics, and cognitive usability. Because fitness and habit apps suffer high drop-off rates due to complex interfaces, FitPulse prioritizes speed, clarity, and low interaction effort.

Key UX Principles Applied

1. Fitts's Law & Touch Ergonomics

Fitts's Law dictates that the time required to rapidly move to a target area is a function of the ratio between the distance to the target and the width of the target. On modern mobile screens, the lower third of the screen is the most comfortable area for thumb interaction ("The Thumb Zone").

- **Application:** High-frequency actions—such as starting a workout, marking a set as complete, or logging a daily habit—are placed in the bottom third of the display. Primary action buttons span full widths to maximize target area, reducing touch errors during workouts.

2. Progressive Disclosure

To prevent cognitive overload, FitPulse separates core tracking features from secondary analysis.

- **Application:** The Dashboard presents only high-level summary metrics (progress rings) and immediate actions. Detailed analytical breakdowns, individual workout history, and granular trend lines are moved to the dedicated Analytics tab. This keeps the primary entry point clean and focused.

3. Jakob's Law & Mental Models

Jakob's Law states that users spend most of their time on other apps, meaning they prefer your app to work the same way as all the others they already know.

- **Application:** FitPulse utilizes standard navigation patterns: a 5-icon persistent bottom navigation bar, standard top bar configurations for profile and notification utilities, and intuitive swipe gestures for items in lists. This eliminates the learning curve for new users.

4. Direct Feedback Loops & Gamification Mechanics

Behavioral psychological models demonstrate that immediate feedback loops strengthen positive habit loops.

- **Application:** When a user completes a set or checks off a habit, instant visual indicators (streak counts, filled progress rings, state transitions) confirm the action. This direct response builds momentum and user engagement.

5. Visual Hierarchy & Contrast

Fitness apps are frequently used in bright environments (outdoors) or under active conditions where focus is split.

- **Application:** High contrast ratio elements are prioritized for key figures. Numerical data (reps, sets, timers) use large sans-serif typography, ensuring quick readability from a distance without requiring close inspection.
